

SUPERSHOT

“The latest Egripment’s fastest Remote Head”.

The SuperShot is the Egripment Remote Head to be added to the line-up of the HotHead, HotShot, MiniShot, MicroShot, and Scanner Elite.

System

The SuperShot is bigger than a MiniShot and is designed with the new generation of HD Cameras in mind. Equipped with digital motors and digital Electronics makes the SuperShot ready for future use in combination with Egripment’s Digital Remote heads.

The SuperShot comes with its own Super Control offering Joystick Pan and Tilt, Zoom and Focus, plus Electronic Damping control.

Movements

Smooth movements, as you are use to with Egripment remote heads, in combination with super speed and simplicity were the targets for this new SuperShot. The movement is a continuous 360 degrees for the pan and tilt direction.

The speed is 2 seconds per 360 degree movement !!!! - which makes the SuperShot the fastest remote head in the broadcast industry. The SuperShot is easy to mount on any kind of support. You can use a flat base, a standard 5/8 inch or 3/8 inch spigot, male or female. Any type of mounting connection is possible.

Cabling

With a direct connection to the camera you can use Triax, Coax, Fibre optic cable or any type of cabling.

Camera Platform

The camera platform is equipped with a slot for 3/8" thread and 1/4" thread camera mounting connections.
